Dear Mr. Gilles:

Terracon Consultants, Inc. (Terracon) is pleased to submit the enclosed Phase I Environmental Site Assessment (ESA) report for the above-referenced Site. This assessment was performed in accordance with our Professional Services Authorization (PSA) number 41003 PS dated June 16, 2022.

We appreciate the opportunity to be of service to you on this project. In addition to Phase I services, our professionals provide geotechnical, environmental, construction materials, and facilities services on a wide variety of projects locally, regionally and nationally. For more detailed information on all of Terracon's services please visit our website at www.terracon.com. If there are any questions regarding this report or if we may be of further assistance, please do not hesitate to contact us.

Sincerely,
Terracon Consultants, Inc.

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was performed in accordance with our Professional Services Authorization (PSA) number 41003 PS dated June 16, 2022, and was conducted consistent with the procedures included in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The ESA was conducted under the supervision or responsible charge of Mark S. Miller, Environmental Professional. Zachary J. Ford performed the Site reconnaissance on September 21, 2022.

Findings and Opinions

A summary of findings is provided below. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

Site Description and Use

The site is composed of approximately 164 acres (the "Site") of the larger approximately 580-acre Airlake Airport facility (the Parent Tract). The Parent Tract, including the Site, is addressed as 8140 220th Street West in Lakeville, Dakota County, Minnesota. The Site consists of one airport runway, multiple taxiways, one shelter, two sheds, landscaped areas, a portion of a trout stream tributary, portions of Cedar Avenue and 225th Street West, and possible wetland areas. Airlake Airport is operated by the Metropolitan Airport Commission (MAC).

Historical Information

Based on a review of available historical information, the Site consisted of three farmsteads, agricultural cropland, Hamburg Avenue, Cedar Avenue, and 225th Street West from at least 1937. By at least 1957, a possible single-family residential building and garage appear near the southeast corner. All but one of the structures associated with one of the three aforementioned farmsteads, the farmstead located in the southern portion of the Site, no longer appears. By at least 1970, a runway, a communications tower, and two buildings associated with the runway appear in the central portion of the Site. Hamburg Avenue and a second of the three aforementioned farmsteads no longer appear, leaving one of the three farmsteads remaining. By at least 1978, two office/warehouse buildings appear in the northwest corner. By at least 1984, two additional commercial buildings appear in the northwest corner. A drive lane and landing strip lights appear at the southeastern end of the runway. A stream appears in the north-northwestern portion of the Site. By at least 1987, a taxiway for airplanes appears north of the runway. A shed appears near the western border. One of the buildings associated with the runway initially identified by at least 1970 no longer appears. The remaining farmstead and single-family residential building and garage in the southeast corner no longer appear. A shed appears in the southeastern portion of the Site. By at least 2006, an additional taxiway appears south of the runway and the four commercial buildings in the northwest corner of the Site no longer appear. By at least 2017, a shelter appears in the north central portion of the Site. The only remaining

structures on the Site consist of the 2017 shelter, and the two sheds which appeared in at least 1987, making the Site consistent with present day.

The area to the north of the Site, consisted of agricultural cropland, Hamburg Avenue with Cedar Avenue beyond from at least 1937. By at least 1970, one apparent hangar appears on the Parent Tract. A portion of 220th Street West appears, which is followed by an office/warehouse building and a rail spur. By at least 1978, two commercial buildings appear and an office/warehouse building appears to the northwest on the Parent Tract. Two additional office/warehouse buildings appear following 220th Street West. By at least 1984, a graded area, a pond, a stream, and an additional commercial building appear on the Parent Tract. An additional office/warehouse building appears following 220th Street West. By at least 1987, numerous airplane hangars appear in the area that was previously graded, portions of the taxiway appears, and the pond no longer appears on the Parent Tract. In the 1990's, additional airplane hangars appear on the Parent Tract. By at least 2006, additional airplane hangars appear on the Parent Tract, and the buildings between the taxiway and 220th Street West no longer appear with the exception of one commercial building. By at least 2010, a hangar/garage building appears on the Parent Tract. By at least 2017, an office/warehouse building appears north of the eastern portion of the Site, making the area consistent with present day.

The area to the east of the Site consisted of agricultural cropland and 225th Street West since at least 1937, making the area consistent with present day.

The area to the south of the Site consisted of agricultural cropland, the Vermillion River, three farmsteads, Cedar Avenue, Hamburg Avenue, and 225th Street West from at least 1937. By at least 1970, Hamburg Avenue appears abandoned on the Parent Tract. By at least 1987, one of the farmsteads no longer appears. By 2006, drive lanes appear south of the western portion of the Site on the Parent Tract. By at least 2019, a concrete pad appears south of the western portion of the Site on the Parent Tract. By at least 2021, four additional hangars appear south of the western portion of the Site on the Parent Tract, making the area consistent with present day.

The area to the west of the Site consisted of Highview Avenue, a rail line, and agricultural cropland from at least 1937. By at least 1970, a natural gas line service station appears to the southwest between the rail line and Highview Avenue, making the area consistent with present day.

Records Review

Regulatory database information was provided by Environmental Data Resources, Inc. (EDR), a contract information service company, and inquiries were made with local government agencies for information related to RECs.

The Site, as part of the Airlake Airport Parent Tract, is identified as Lakeville Police Gun Range in the Brownfields, Site Remediation Section (SRS), Voluntary Investigation and Cleanup (VIC) and What's In My Neighborhood (WIMN) databases; as Shooting Range in the SRS database; as Lejeune Bolt Co in the Manifest, Environmental Compliance History Online (ECHO), Resource

Conservation Recovery Act Non-Generating / No Longer Regulated (RCRA NonGen / NLR), and WIMN databases; and as Watkins Pattern Co in the RCRA – Very Small Quantity Generator (RCRA-VSQG) and WIMN databases. The Lejeune Bolt Co and Watkins Pattern Co facilities no longer exist at the Site.

According to a Minnesota Pollution Control Agency (MPCA) Site Closure Peer Review document dated September 23, 2015, the Lakeville Police Gun Range / Shooting Range (the Range) is located southeast of the intersection of Cedar Avenue and 225th Street West, which is located on the Site. The Range was leased to the City of Lakeville Police Department and the Dakota County Sheriff's Department for use as a small arms target shooting range. The two law enforcement agencies discontinued use of the Range in October 2009, and initiated environmental investigation activities in November 2010. Environmental investigation results indicated levels of lead and, to a lesser extent arsenic, in soils above MPCA action levels at the Range, with the highest concentrations found in the soil berm that formed the backdrop for the target setup area. Lead concentrations were reported up to 10,200 mg/kg, which exceeded the MPCA Residual Soil Reference Value (SRV) of 300 mg/kg. Arsenic concentrations were above the MPCA Residential SRV of 9 mg/kg in the berm area but not elsewhere. Surface water samples collected from the wetland area during this investigation stage indicated lead concentrations at 19.9 micrograms per liter (µg/L) with respect to the Minnesota's site-specific Class 2B surface water chronic standard of 19 µg/L.

Response action activity took place at the Range in 2012 and consisted of excavation of metals-impacted soils, sampling for toxicity characteristic leaching procedure (TCLP) hazardous waste characterization, and subsequent non-hazardous landfill disposal. The finished excavation was sampled to confirm removal of impacted materials, and groundwater monitoring wells were installed near the former berm and in the wetland areas to test for groundwater and surface water impacts. Successive sampling rounds completed for groundwater samples from the wells indicated that groundwater and surface water impacts are not occurring.

MPCA VIC staff review of environmental investigation and response action documents prepared by the Voluntary Response Party's (VRP's) consultant subsequently led to the issuance of a No Further Action Letter for the Range dated February 7, 2013. The Site Assessment project number for the Range (SA225) was closed on July 30, 2015.

The residual impacts, based on the closure of the VIC and Site Assessment listings at the former Lakeville Police Gun Range / Shooting Range represents, a controlled recognized environmental condition (CREC) to the Site.

The former Watkins Pattern Co, which was located in the northwest portion on the Site, is identified as an industrial pattern manufacturer, which had a very small quantity generator permit for hazardous wastes. According to WIMN, very small quantity generators produce 220 pounds or less of hazardous waste, and less than 2.2 pounds of acute hazardous waste per month.

Indications of violations and/or releases were not identified. Based on regulatory status, the Watkins Pattern Co facility does not represent a REC to the Site.

The former Lejeune Bolt Co, which was located in the northwest portion on the Site, was assigned a small to minimal quantity generator hazardous waste permit. Indications of violations and/or releases were not identified. Based on regulatory status, the Lejeune Bolt Co facility does not represent a REC to the Site.

The north-adjacent and up-gradient facility located on the Parent Tract, is identified as Air Trek North in the RCRA-SQG and WIMN databases; as Aircraft Resource Center in the Minnesota Enforcement Log (ENF), LUST, Manifest, NPDES, SRS, UST, RCRA-VSQG, and WIMN databases; as North Memorial Air Care 1 in the RCRA-VSQG and WIMN databases; and as Twin Cities Aviation in the WIMN database.

Aircraft Resource Center is assigned MPCA Tank Site TS0001322 in association with one removed 12,000-gallon aviation gasoline UST, two removed 12,000-gallon gasoline USTs, one active 12,000-gallon jet fuel UST installed in 1990, and one active 12,000-gallon aviation gasoline UST installed in 1990.

MPCA Leak Site LS0003161 is assigned to the facility in association with a release of aviation gas discovered on August 29, 1990. According to a 1995 Hydrologic Site Review, a total of five groundwater monitoring wells were installed at the leak site, with one well in the upgradient and the other four in the downgradient from the excavation area, which was located on the northern border of the Site. “No Benzene, Ethylbenzene, Toluene and Xylene (BTEX) above the Minnesota Department of Health (MDH) Recommended Allowable Limits (RALs) were ever recorded from any of the existing monitoring wells to date.” LS0003161 was assigned closure on October 23, 1995 based on the information provided in the 1995 Hydrologic Site Review. Based on the proximity of LS003161 to the Site and a lack of soil vapor sampling in the area, the potential for impacts to remain in the vicinity of the leak site represents a REC to the Site.

MPCA Leak Site LS0014651 is assigned to the facility in association with a release of aviation gas and jet fuel discovered on March 1, 2002. According to an Investigation Report Form dated July 27, 2005, Soil samples collected from two borings detected concentrations of DRO, GRO, and VOCs in soil samples collected from 12 to 16 feet and 16 to 20 feet. Groundwater samples collected naphthalene at concentrations of 1.1 parts per billion (ppb), DRO at 4.0 parts per million (ppm), and GRO at 0.580 ppm. Soil vapor investigation was not conducted. LS0014651 is located north-adjacent to the Site. Based on the proximity of LS0014651 to the Site and a lack of soil vapor sampling in the area, the identified impacts represent a REC to the Site.

The remaining facilities listed in the database report do not appear to represent RECs to the Site at this time based upon regulatory status, apparent topographic gradient, and/or distance from the Site.

Mr. Michael Meyer, Fire Chief of the Lakeville Fire Department, stated that the Lakeville Fire Department provides fire protection to the airport and has foam capable trucks. According to Mr. Meyer, the Lakeville Fire Department has used the Enforcer brand Firebull F3 Fluorine Free Foam for the past five years. The product website states that Firebull F3 holds third party verification of concentrate free from PFOS and other PFAS. He stated that the Lakeville Fire Department has not used foam at the airport in the past 12 years.

Site Reconnaissance

During the Site reconnaissance, Terracon observed the Site to consist of one airport runway, multiple taxiways, a shelter, landscaped areas, a possible wetland area, an ephemeral trout stream tributary, 225th Street West, and Cedar Avenue. Terracon observed one natural gas pipeline marker and three petroleum pipeline markers. Evidence of RECs were not observed during the Site reconnaissance.

Adjoining Properties

To the north of the Site is 220th Street West followed by a commercial building with no tenants of readily apparent environmental concern (8415 220th Street West), C-P Flexible Packaging (8235 220th Street West), and Menasha Corporation (8085 220th Street West); the Parent Tract occupied by grass land, Airlake Airport Maintenance Building (8140 220th Street West), North Memorial Aircare Lakeville, Waypoint Flight Services and Aloft Aviation, Wentworth Aircraft, Inc., and numerous aircraft hangars; and Menasha (22202 Cedar Avenue). To the east of the Site is 225th Street West and agricultural cropland. To the south of the Site is a rail line, vacant grass land, four hangars, agricultural cropland, 225th Street West, Lao Buddhist Temple of Minnesota (22605 Cedar Avenue), Cedar Avenue, wooded land and Vermillion River. To the west of the Site is Highview Avenue, a rail line, a natural gas pipeline station, agricultural cropland, and undeveloped vacant land. Indications of RECs were not observed with the adjoining properties.

Significant Data Gaps

Significant data gaps were not identified during the course of this Phase I Environmental Site Assessment.

Conclusions

We have performed a Phase I ESA consistent with the procedures included in ASTM Practice E 1527-13 at 8140 220th Street West in Lakeville, Dakota County, Minnesota, the Site. The following Recognized Environmental Conditions (RECs) or Controlled RECs (CRECs) were identified in connection with the Site:

- **Closed VIC and Site Assessment Listings on-Site:** The former Lakeville Police Gun Range / Shooting Range area in the southeastern corner of the Site was opened in response to elevated levels of lead and arsenic identified in soil, surface water, and groundwater. Response actions took place which resulted in the removal of impacted soils and installation of groundwater monitoring wells.

Sampling of the groundwater monitoring wells indicated that groundwater and surface water impacts are not occurring. The residual impacts, based on the subsequent closure of the VIC and Site Assessment listings at the former Lakeville Police Gun Range / Shooting Range, represents a CREC to the Site.

- **Adjacent Leak Sites With Remaining Impacts:** The north-adjacent and up-gradient facility is assigned leak site LS0003161 in association with a release of aviation gas discovered in 1990, later closed in 1995. LS0014651 is also assigned to the facility in association with a release of aviation gas and jet fuel discovered in 2002, later closed in 2005. GRO, DRO, and VOCs were detected in soil samples collected from 12 to 20 feet. Naphthalene, DRO, and GRO was detected in groundwater samples collected. Soil vapor sampling was not completed in association with either leak site. Based on the proximity of the remaining impacts to the Site and the lack of soil vapor sampling conducted, these releases represent a REC to the Site.

Recommendations

Based on the scope of services, limitations, and conclusions of this assessment, Terracon does not recommend additional actions.

Item of Environmental Note

It should be noted that per- and polyfluoroalkyl substances (PFAS) is not anticipated to be a concern at Airlake Airport. Airlake is a general aviation airport and does not have on-Site firefighting capabilities, therefore, it does not have aqueous film-forming foam (AFFF) inventory. AFFF is known to include PFAS. In addition, there are no tenant hangar fire suppression systems that contain AFFF. Therefore, unlike some other commercial airports, Airlake Airport is not expected to have PFAS impacts associated with airport operations. Furthermore, emergency response activities at the airport are provided by the Lakeville Fire Department, which indicated that they have not utilized foam at the airport for at least the past 12 years (the period of time reviewed for past activity). In addition, they now utilize a fluorine-free (non-PFAS containing) foam for fire suppression of fuel fires.

1.0 INTRODUCTION

1.1 Site Description

Site Name	Airlake Airport – Runway Improvements Area
Site Location/Address	8140 220th Street West, Lakeville, Dakota County, Minnesota
Land Area	Approximately 164 acres
Site Improvements	One airport runway, associated taxiways, landscaped areas, a trout stream tributary, portions of Cedar Avenue and 225th Street West, possible wetland areas, and agricultural land
Anticipated Future Site Use	Continued use as current development/use
Reason for the ESA	Runway Reconstruction and Extension to 4,850 feet

The location of the Site is depicted on Exhibit 1 of Appendix A, which was reproduced from a portion of the USGS 7.5-minute series topographic map. The Site and adjoining properties are depicted on the Site Diagram, which is included as Exhibit 2 of Appendix A. Acronyms and terms used in this report are described in Appendix F.

1.2 Scope of Services

This Phase I ESA was performed in accordance with our Professional Services Authorization (PSA) number 41003 PS dated June 16, 2022, and was conducted consistent with the procedures included in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the Site as reflected by the scope of this report. This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews, including local government inquiries, as applicable, and a visual noninvasive reconnaissance of the Site and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

ASTM E1527-13 contains a new definition of "migrate/migration," which refers to “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.” By including this explicit reference to migration in ASTM E1527-13, the Standard clarifies that the potential for vapor migration should be addressed as part of a Phase I ESA. This Phase I ESA has considered vapor migration in evaluation of RECs associated with the Site.

1.3 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance, a client-driven scope of work, or inability to review information not received by the report date. Where appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this Site, are of limited scope, are noninvasive, and cannot eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the Site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records were not reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the Site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.4 Additional Scope Limitations, ASTM Deviations and Data Gaps

Based upon the agreed-on scope of services, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e. evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder. This ESA was further limited by the following:

- At the issuance of this report, a response had not been received from the Dakota County Environmental Department.
- Terracon requested further information regarding nearby leak sites from the MPCA, but as of the time of issuance of this report, responses were not received.

- At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

An evaluation of the significance of limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations, or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the Site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after Site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

1.5 Reliance

This ESA report is prepared for the exclusive use and reliance of Metropolitan Airports Commission. Use or reliance by any other party is prohibited without the written authorization of Metropolitan Airports Commission and Terracon Consultants, Inc. (Terracon).

Reliance on the ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal, ESA report, and Terracon's Agreement. The limitation of liability defined in the Agreement is the aggregate limit of Terracon's liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E1527-13 Sections 4.6 and 4.8. If the ESA will be used by a different user (third party) than the user for whom the ESA was originally prepared, the third party must also satisfy the user's responsibilities in Section 6 of ASTM E1527-13.

1.6 Client Provided Information

Prior to the Site visit, Eric Gilles, client's representative, was asked to provide the following user questionnaire information as described in ASTM E1527-13 Section 6.

Client Questionnaire Responses

Client Questionnaire Item	Client Did Not Respond	Client's Response	
		Yes	No
Specialized Knowledge or Experience that is material to a REC in connection with the Site.			X
Actual Knowledge of Environmental Liens or Activity Use Limitations (AULs) that may encumber the Site.			X
Actual Knowledge of a Lower Purchase Price because contamination is known or believed to be present at the Site.			X
Commonly Known or Reasonably Ascertainable Information that is material to a REC in connection with the Site.			X
Obvious Indicators of Contamination at the Site.			X

Terracon's consideration of the client provided information did not identify RECs. A copy of the questionnaire is included in Appendix C.

2.0 PHYSICAL SETTING

Physical Setting Information		Source
Topography		
Site Elevation	Approximately 940 to 960 feet above sea level	USGS Topographic Map, Farmington, Minnesota Quadrangle, 2019 (Appendix A)
Topographic Gradient	Relatively flat area with general gradient towards the southeast	
Closest Surface Water	Vermillion River, approximately 450 feet southeast of the Site.	
Soil Characteristics		
Soil Type	Waukegan silt loam; Ostrander loam; Marshan silty clay loam; Wadena loam; Urban land – Waukegan complex; Anthroportic Udorthents; Kennebec silt loam; Estherville sandy loam; Kanaranzi loam; Mayer loam, swales; Klinger silt loam	Dakota County, MN USDA-NRCS Web Soil Survey accessed September 12, 2022
Description	Waukegan silt loam: Well drained silt loam to gravelly sand with 0 to 6 percent slopes. Ostrander loam: Well drained loam with 1 to 12 percent slopes.	

Physical Setting Information		Source
	Marshan silty clay loam: Poorly drained silty clay loam to loam to sand with 0 to 2 percent slopes. Wadena loam: Well drained loam to gravelly loamy coarse sand with 2 to 6 percent slopes. Urban land – Waukegan complex: Well drained silt loam to gravelly sand with 0 to 1 percent slopes. Anthroportic Udorthents: Moderately well drained loam with 2 to 9 percent slopes. Kennebec silt loam: Moderately well drained silt loam with 0 to 2 percent slopes. Estherville sandy loam: Somewhat excessively drained sandy loam to gravelly loamy coarse sand with 2 to 6 percent slopes. Kanaranzi loam: Well drained loam to silt loam to loamy sand to coarse sand with 2 to 6 percent slopes. Mayer loam swales: Very poorly drained loam to gravelly loamy sand with 0 to 2 percent slopes. Klinger silt loam: Somewhat poorly drained silt loam to loam with 1 to 5 percent slopes.	
Geology/Hydrogeology		
Formation	Prairie du Chien Group	University of Minnesota, Minnesota Geological Survey, County Atlas Series, Atlas C-6, Plate 2 of 9, Bedrock Geology, 1990
Description	Commonly thin bedded and sandy or oolitic, and contains thin beds of sandstone and chert.	
Estimated Depth to First Occurrence of Groundwater	Approximately 10 to 35 feet below ground surface (bgs)	University of Minnesota, Minnesota Geological Survey, County Atlas Series, Atlas C-6, Plate 5 of 9, Quaternary Hydrogeology, 1990
*Hydrogeologic Gradient	To the east, based on a Progress Report dated December 1991, prepared by Wenck Associates for a facility on the Parent Tract.	

* The groundwater flow direction and the depth to shallow, unconfined groundwater, if present, would likely vary depending upon seasonal variations in rainfall and other hydrogeological features. Without the benefit of on-Site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the Site cannot be directly ascertained.

3.0 HISTORICAL USE INFORMATION

Terracon reviewed the following historical sources to develop a history of the previous uses of the Site and surrounding area, in order to help identify RECs associated with past uses. Copies of selected historical documents are included in Appendix C.

3.1 Historical Topographic Maps, Aerial Photographs, Sanborn Maps

Readily available historical USGS topographic maps, selected historical aerial photographs (at approximately 10- to 15-year intervals) and historical fire insurance maps produced by the Sanborn Map Company were reviewed to evaluate land development and obtain information concerning the history of development on and near the Site. Reviewed historical topographic maps, aerial photographs and Sanborn maps are summarized below.

Historical fire insurance maps produced by the Sanborn Map Company were requested from EDR to evaluate past uses and relevant characteristics of the Site and surrounding properties. Based upon inquiries to the above-listed Sanborn provider, Sanborn maps were not available for the Site.

- Topographic maps:
  - Prior Lake, Minnesota: **1957** (1: 62,500)
  - Farmington, Minnesota: **1957** (1: 62,500), **1974, 1993, 2013, 2016, 2019** (1: 24,000)

Historical Maps and Aerial Photographs

Direction	Description
Site	Three farmsteads, agricultural cropland, Hamburg Avenue, Cedar Avenue, 225th Street West (1937-1951); a possible single-family residential building and garage appear near the southeast corner, all but one of the structures associated with a farmstead in the southern portion no longer appear (1957-1964); a runway, a communications tower, and two buildings associated with the runway appear in the central portion, Hamburg Avenue and one farmstead no longer appears on the Site (1970); two office/warehouse buildings appear in the northwest corner (1978); two additional commercial buildings appear in the northwest corner, a drive lane, and landing strip lights appear at the southeastern end of the runway, a stream appears in the north-northwestern portion (1984); a taxiway for airplanes appears north of the runway, a shed appears near the western border, one of the buildings associated with the runway identified by at least 1970 no longer appears, the farmstead and single-family residential building and garage in the southeast corner no longer appear, a shed appears in the southeastern portion (1987-1997); an additional taxiway appears south of the western portion of the Site, the buildings in the northwest corner no longer appear (2006-2013); a shelter appears in the north central portion (2017-2021)
North	Agricultural cropland, Hamburg Avenue, Cedar Avenue (1937-1964); one apparent hangar appears on the Parent Tract, a portion of 220th Street West appears and is followed by an office/warehouse building and a rail spur (1970); two commercial buildings appear and an office/warehouse building appears to the northwest, two additional office/warehouse buildings appear following 220th Street West (1978); a graded area, a pond, and a stream appear on the Parent Tract, an additional office/warehouse building appears following 220th Street West, and an additional commercial building appears followed by 220th Street West (1984); numerous airplane hangars appear in the area that was previously graded, portions of the drive lane for airplanes appears, and the pond no longer appears on the Parent Tract (1987); additional airplane hangars appear on the Parent Tract (1991); additional airplane hangars appear on the Parent Tract (1997); additional airplane hangars appear, the buildings between the taxiway and 220th Street West no longer appear with the exception of one commercial building on the Parent Tract (2006); a hangar/garage building appears on the Parent Tract (2010-2013); a office/warehouse building appears on the Parent Tract north of the eastern portion of the Site (2017-2021)
East	Agricultural cropland, 225th Street West (1937-2021)
South	Agricultural cropland, Vermillion River, three farmsteads, Cedar Avenue, Hamburg Avenue, 225th Street West (1937-1964); Hamburg Avenue appears abandoned on the Parent Tract (1970-1984); one of the farmsteads no longer appears (1987-1997); a taxiway appear south of the western portion of the Site on the Parent Tract (2006-2017); a concrete pad appears south of the western portion of the Site on the parent tract (2019-2020); four additional hangars appear south of the western portion of the Site on the Parent Tract (2021)
West	Highview Avenue, a rail line, agricultural cropland (1937-1964); a possible natural gas line service station appears to the southwest between the rail line and Highview Avenue (1970-2021)

3.2 Historical City Directories

The Cole Criss-Cross Directory and EDR Digital Archive city directories used in this study were made available through EDR (selected years reviewed: 1977-2017) and were reviewed at approximate five-year intervals, if readily available. Street listings were not available prior to 1977. The current street address for the Site was identified as 8140 220th Street West. Historic Site addresses included 8330 220th Street West and 8420 220th Street West. Suspect use operations are indicated with *italic, underlined* font and are discussed below the table.

Suspect use operations on-Site include Watkins Pattern Co from at least 1977 to at least 2000. Based on a review of available database information, as stated in Section 4.1, the former Watkins Pattern Co does not represent a REC to the Site.

Suspect use operations to the north of the Site include Stampings of Minnesota Inc at 21980 Hamburg Avenue from at least 1982 to at least 2017; the businesses at 21955 Grenada Avenue

which include Midstate Trucking Incorporated from at least 2000 to at least 2010, Midstate Reclamation SD Inc in at least 2005, and Midstate Reclamation from at least 2014 to at least 2017; the businesses at 8235 220th Street West which include Star-Tex Corporation from at least 1982 to at least 1995, Rexam Flexible Packaging in at least 2000, Tyco Plastics & Adhesives from at least 2005 to at least 2010, Berry Plastics in at least 2010, and Genpak Corporation from at least 2014 to at least 2017. See Section 4.1 for a discussion of the suspect use operations to the north of the Site.

Suspect use operations to the west of the Site include The Scotts Company LLC in at least 2017. Based on distance to the Site (over 1,200 feet southwest) and its cross-gradient location, this facility does not represent a REC to the Site.

3.3 Site Ownership

Based on a review of information obtained from the Dakota County assessor's records, the current Site owner is Metropolitan Airports Commission. Previous owners were not identified.

3.4 Title Search

At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.5 Environmental Liens and Activity and Use Limitations

The EDR regulatory database report included a review of both Federal and State Engineering Control (EC) and Institutional Control (IC) databases. Based on a review of the database report, the Site was not listed on the EC or IC databases. Please note that in addition to these federal and state listings, AULs can be recorded at the county and municipal level that may not be listed in the regulatory database report. Environmental lien and activity and use limitation records recorded against the Site were not provided by the client. At the direction of the client, performance of a review of these records was not included as part of the scope of services and unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.6 Interviews Regarding Current and Historical Site Uses

The following individual was interviewed regarding the current and historical use of the Site.

Interviews

Interviewer	Name / Phone #	Title	Date/Time
Zachary J. Ford	Rob Dockry / 605-553-1666	MAC Field Maintenance Assistant Manager	September 21, 2022 / 8:30 AM

Terracon interviewed Mr. Rob Dockry, MAC Field Maintenance Assistant Manager, during the Site reconnaissance. Mr. Dockry indicated that he has been familiar with the Site for six years. Mr. Dockry noted that the MAC acquired Airlake Airport in the 1970s or 1980s. Mr. Dockry stated that five or six underground petroleum and/or natural gas pipelines bisect the Site, but was unaware of any issues with the underground pipelines. He stated that a UST was removed in 2021 from the vicinity of the Maintenance building on the Parent Tract and was replace by an AST. Mr. Dockry stated that the Lakeville Fire Department provides emergency fire services to the facility and Airlake Airport does not have their own on-Site firefighting capabilities.

Mr. Dockry was unaware of any environmental issues or concerns with the Site.

3.7 Prior Report Review

Terracon requested the client provide any previous environmental reports they are aware of for the Site. Previous reports were not provided by the client to Terracon for review.

4.0 RECORDS REVIEW

Regulatory database information was provided by EDR, a contract information services company. The purpose of the records review was to identify RECs in connection with the Site. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated. The scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

In some of the following subsections, the words up-gradient, cross-gradient and down-gradient refer to the topographic gradient in relation to the Site. As stated previously, the groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-Site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the Site cannot be directly ascertained.

4.1 Federal and State/Tribal Databases

Listed below are the facility listings identified on federal and state/tribal databases within the ASTM-required search distances from the approximate Site boundaries. Database definition, descriptions, and the database search report are included in Appendix D.

Federal Databases

Lakeville Police Gun Range / Shooting Range / Lejeune Bolt Co / Watkins Pattern Co

The Site, as part of the Airlake Airport Parent Tract, is identified as Lakeville Police Gun Range in the Brownfields, Site Remediation Section (SRS), Voluntary Investigation and Cleanup (VIC) and What's In My Neighborhood (WIMN) databases; as Shooting Range in the SRS database; as Lejeune Bolt Co in the Manifest, Environmental Compliance History Online (ECHO), Resource Conservation Recovery Act Non-Generating / No Longer Regulated (RCRA NonGen / NLR), and WIMN databases; and as Watkins Pattern Co in the RCRA – Very Small Quantity Generator (RCRA-VSQG) and WIMN databases. The Lejeune Bolt Co and Watkins Pattern Co facilities no longer exist at the Site.

According to a Minnesota Pollution Control Agency (MPCA) Site Closure Peer Review document dated September 23, 2015, the Lakeville Police Gun Range / Shooting Range (the Range) is located southeast of the intersection of Cedar Avenue and 225th Street West, but with no formal listed address. It is owned by the Metropolitan Airport Commission (MAC), and was leased to the City of Lakeville Police Department and the Dakota County Sheriff's Department for use as a small arms target shooting range. The Range occupies a former gravel quarry on the north end of a small wetland area with a likely hydrologic connection to the east-flowing Vermillion River, approximately 900 feet to the south. It is surrounded primarily by agricultural land. Topography is flat with a gradual slope to the south-southeast.

The two law enforcement agencies discontinued use of the Range in October 2009, and initiated environmental investigation activities in November 2010 as a means of terminating their lease with the MAC. Environmental issues with metals impacts (primarily lead) were anticipated and planned for due to the nature of the Range's use as a target range. Investigation results did in fact indicate elevated levels of lead and, to a lesser extent, arsenic, in soils at the Range, with the highest concentrations found in the soil berm that formed the backdrop for the target setup area. Lead concentrations were observed to range from 50 milligrams per kilogram (mg/kg) up to 10200 mg/kg, with consistent exceedances of the State Residential SRV of 300 mg/kg. Arsenic concentrations were slightly elevated above the State Residential SRV of 9 mg/kg in the berm area but not elsewhere. Surface water samples collected from the wetland area during this investigation stage indicated lead concentrations slightly elevated (19.9 micrograms per liter (µg/L)) with respect to the State's site-specific Class 2B surface water chronic standard of 19 µg/L.

The identified metals release was reported to the Minnesota Duty Officer on April 20, 2011 (report no. 118494), and the Range entered the MPCA's VIC program in May 2011 (VP27340), with the City of Lakeville Police Department as the voluntary responsible party (VRP). Response action activity took place in 2012 and consisted of excavation of metals-impacted soils, sampling for toxicity characteristic leaching procedure (TCLP) hazardous waste characterization, and subsequent non-hazardous landfill disposal. The finished excavation was sampled to confirm removal of impacted materials, and groundwater monitoring wells were installed near the former berm and in the wetland areas to test for groundwater and surface water impacts. Successive sampling rounds on the wells indicated that groundwater and surface water impacts are not occurring.

The Range's entry into the Site Assessment program apparently was triggered by the April 2011 duty officer report. However, the Range's environmental issues have been successfully investigated and remediated under the VIC program. VIC staff review of environmental investigation and response action documents prepared by the VRP's consultant subsequently led to the issuance of a No Further Action Letter for the Range on February 7, 2013. The Site Assessment project number for the Range (SA225) is redundant, and the Site Assessment file was closed on July 30, 2015.

The residual impacts, based on the closure of the VIC and Site Assessment listings at the former Lakeville Police Gun Range / Shooting Range, represents a CREC to the Site.

The former Watkins Pattern Co, which was located in the northwest portion on the Site, is identified as an industrial pattern manufacturer, which had a very small quantity generator permit for hazardous wastes. According to WIMN, very small quantity generators produce 220 pounds or less of hazardous waste, and less than 2.2 pounds of acute hazardous waste per month. Indications of violations and/or releases were not identified. Based on regulatory status, the Watkins Pattern Co facility does not represent a REC to the Site.

The former Lejeune Bolt Co, which was located in the northwest portion on the Site, was assigned a small to minimal quantity generator hazardous waste permit. Indications of violations and/or releases were not identified. Based on regulatory status, the Lejeune Bolt Co facility does not represent a REC to the Site.

MAC Airlake Airport

This facility, surrounding the Site on the Parent Tract, is identified in the Aboveground Storage Tank (AST), ECHO, Manifest, National Pollutant Discharge Elimination System (NPDES), Tier 2, Underground Storage Tank (UST), RCRA-VSQG, and WIMN databases.

MPCA Tank Site TS0015561 is assigned to the Metro Airport Commission/Airlake Equipment Building on the Parent Tract as one removed 1,000-gallon gasoline UST, one removed 1,000-gallon diesel UST, and one 250-gallon used oil AST are registered to the tank site, which is located approximately 150 west of the Site. The gasoline and diesel USTs were removed on May 31, 2022. Indications of releases were not identified in association with TS0015561.

The facility is assigned a construction stormwater permit in association with construction activities occurring south of the Site. Indications of violations and/or releases were not identified.

The facility is qualified as a conditionally exempt small quantity generator of hazardous wastes with no indications of violations or releases associated with the hazardous waste permit.

Based on the regulatory status, this facility does not represent a REC to the Site.

Multi Flight Inc

This facility, formerly located north-adjacent to the Site on the Parent Tract and up-gradient, is identified in the ECHO, Leaking Underground Storage Tank (LUST), RCRA-VSQG, SRS, UST, and WIMN databases.

MPCA Tank Site TS0017494 is assigned to the facility as one removed 5,000-gallon aviation gasoline UST is registered to the tank site, located approximately 500 feet east of the proposed construction activities.

Leak Site LS0009054 is assigned to the facility in association with a release of aviation gasoline discovered on December 28, 1995. The MPCA assigned LS0009054 closure on July 8, 1996. Terracon requested further information from the MPCA, but as of the time of issuance of this report, a response was not received.

Based on a lack of information provided regarding LS0009054, the aviation gasoline release represents a REC to the Site.

North Air Care

This facility, located north-adjacent to the Site on the Parent Tract and up-gradient, is identified in the NPDES and WIMN databases regarding an inactive industrial stormwater permit. Indications

of violations and/or releases were not identified. Based on regulatory status, this facility does not represent a REC to the Site.

Air Trek North / Aircraft Resource Center / North Memorial Air Care 1 / Twin Cities Aviation

This facility, located north-adjacent to the Site on the Parent Tract and up-gradient, is identified as Air Trek North in the RCRA-SQG and WIMN databases; as Aircraft Resource Center in the Minnesota Enforcement Log (ENF), LUST, Manifest, NPDES, SRS, UST, RCRA-VSQG, and WIMN databases; as North Memorial Air Care 1 in the RCRA-VSQG and WIMN databases; and as Twin Cities Aviation in the WIMN database.

Aircraft Resource Center is assigned MPCA Tank Site TS0001322 in association with one removed 12,000-gallon aviation gasoline UST, two removed 12,000-gallon gasoline USTs, one active 12,000-gallon jet fuel UST installed in 1990, and one active 12,000-gallon aviation gasoline UST installed in 1990. According to WIMN, the facility has been assessed citation warnings with no penalty in 2006, 2012, 2015, and in July 2022. One penalty of $150 associated with a 2012 citation was assessed. Further information regarding the citation warnings and citation was not provided.

MPCA Leak Site LS0003161 is assigned to the facility in association with a release of aviation gas discovered on August 29, 1990. According to the WIMN website, 850 cubic yards of soil was excavated from the leak site. 1,362 cubic yards of soil was thermally treated and disposed of off-site. According to a Hydrologic Site Review dated October 16, 1995, LS0003161 was recommended for site closure. The 1995 Hydrologic Site Review stated that a total of five groundwater monitoring wells were installed at the leak site, with one well in the upgradient and the other four in the downgradient from the excavation area, which was located on the northern border of the Site. Groundwater flow direction was determined to be to the east. Nine rounds of groundwater sampling were conducted. “No Benzene, Ethylbenzene, Toluene and Xylene (BTEX) above the Minnesota Department of Health (MDH) Recommended Allowable Limits (RALs) were ever recorded from any of the existing monitoring wells to date.” LS0003161 was assigned closure on October 23, 1995 based on the information provided in the 1995 Hydrologic Site Review. Based on the proximity of LS003161 to the Site and a lack of soil vapor sampling in the area, the potential for impacts to remain in the vicinity of the leak site represents a REC to the Site.

MPCA Leak Site LS0014651 is assigned to the facility in association with a release of aviation gas and jet fuel discovered on March 1, 2002. According to an Investigation Report Form dated July 27, 2005, Nova Consulting Group (Nova) completed six geoprobe soil borings in the area of former USTs and pump islands and analyzed soil samples for diesel range organics (DRO), gasoline range organics (GRO), total lead, and volatile organic compounds (VOCs). Soil samples collected from two borings (GP-3 and GP-4) detected concentrations of DRO, GRO, and VOCs in soil samples collected from 12 to 16 feet in GP-3 and 16 to 20 feet in GP-4. Groundwater samples collected from GP-5 detected naphthalene at concentrations of 1.1 parts per billion (ppb). Groundwater samples collected from GP-4 detected concentrations of DRO at 4.0 parts per million (ppm) and GRO at 0.580 ppm. Soil vapor investigation was not conducted. LS0014651 is

located north-adjacent to the Site. Based on the proximity of LS0014651 to the Site and a lack of soil vapor sampling in the area, the identified impacts represent a REC to the Site.

Menasha Corp / Menasha Packaging – Lakeville Container
This facility, located north-adjacent and up-gradient, is identified as Menasha Corp in the RCRA-VSQG database; and as Menasha Packaging – Lakeville Container in the Airs, AST, Manifest, NPDES, Tier 2, UST, and WIMN databases.

MPCA Tank Site TS0001250 is assigned to the facility in association with one removed 20,000-gallon fuel oil UST and one 165-gallon used oil AST.

The facility is assigned a hazardous waste permit as a very small quantity generator. An inactive construction stormwater permit, one inactive industrial stormwater permit and one active industrial stormwater permit are assigned to the facility. The facility is also assigned an active air quality permit. Indications of releases and/or violations in association with the listings were not identified.

Based on regulatory status, this facility does not represent a REC to the Site.

Uponor
This facility, located north-adjacent and up-gradient, is listed in the NPDES, TIER 2, and WIMN databases regarding an active industrial stormwater permit, and a number of potentially hazardous materials stored at the facility. Indications of violations and/or releases were not identified. Based on regulatory status, this facility does not represent a REC to the Site.

Airlake Development Inc
This facility, located north-adjacent and up-gradient, is listed in the WIMN database regarding a construction stormwater permit. Indications of violations and/or releases were not identified. Based on regulatory status, this facility does not represent a REC to the Site.

Empire Builder Investments 1st Addition
This facility, located north-adjacent and up-gradient, is listed in the WIMN database regarding a construction stormwater permit. Indications of violations and/or releases were not identified. Based on regulatory status, this facility does not represent a REC to the Site.

Buzzell Aircraft Service
This facility, located north-adjacent and up-gradient, is listed in the ECHO, RCRA NonGen / NLR, and WIMN databases regarding hazardous wastes formerly generated by the facility. Indications of violations and/or releases were not identified. Based on regulatory status, this facility does not represent a REC to the Site.

Crown Cork & Seal
This facility, located north-adjacent and up-gradient, is listed in the Manifest, AST, UST, RCRA NonGen / NLR, and WIMN databases.

The facility is assigned MPCA Tank Site TS0001167 in association with five removed 6,000-gallon "chemical other or unspecified" USTs, one 6,000-gallon used oil AST, three 6,000-gallon "chemical other or unspecified" ASTs, and one 6,000-gallon lubricating oil AST. Indications of violations and/or releases were not identified in association with the listings at the facility, and as such, this facility does not represent a REC to the Site.

Berry Plastics-Flexible Films Division / CP Flexible Packaging-Lakeville

This facility, located approximately 410 feet north and up-gradient, is identified as Berry Plastics-Flexible Films Division in the Brownfields, SRS, TIER 2, and VIC databases; and as CP Flexible Packaging-Lakeville in the AIRS, Minnesota Enforcement Log (ENF), AST, Leaking Aboveground Storage Tank (LAST), LUST, Manifest, Minnesota List of Sites (MN LS), NPDES, RCRA – Large Quantity Generator (RCRA – LQG), Spills, SRS, TIER 2, UST, and WIMN databases.

The facility is assigned MPCA Tank Site TS0001038 in association with one removed 6,000-gallon gasoline UST, one removed 6,000-gallon diesel UST, one 1,000-gallon "other" AST, one 400-gallon hydraulic fluid AST, one closed 220-gallon antifreeze AST, and one closed 220-gallon used oil AST.

Voluntary Investigation and Cleanup site VP15190 was opened by the MPCA on November 19, 2001 and closed on July 30, 2002. According to a Technical Assistance Letter dated January 10, 2002 regarding VP15190, the facility buildings were used for the manufacture and warehousing of single and multi-layer extruded plastic film. Leak Site LS0003361 was reported following the removal of two USTs on October 9, 1990 and was closed on February 22, 1995. Several soil probes were advanced at the facility during a Phase II Investigation, which indicated diesel range organic (DRO) impacts in some soil samples in the vicinity of the former USTs. Cobalt, iron, and aluminum were detected in filtered groundwater samples at concentrations greater than the Health Risk Limits (HRLs) established by the Minnesota Department of Health (MDH); however, it was determined that these may be naturally occurring or the result of off-site sources. It was determined that based on the analyses of soil and groundwater samples collected, a release of a hazardous substance did not occur, with the exception of the petroleum release from the former USTs. Terracon requested further information regarding LS0003361 and VP15190 from the MPCA, but as of the time of issuance of this report, a response was not received.

Based on the distance from the facility to the Site, this facility does not represent a REC to the Site.

The remaining facilities listed in the database report do not appear to represent RECs to the Site at this time based upon regulatory status, apparent topographic gradient, and/or distance from the Site.

Unmapped facilities are those that do not contain sufficient address or location information to evaluate the facility listing locations relative to the Site. The report listed four facilities in the unmapped section. Determining the location of unmapped facilities is beyond the scope of this

assessment; however, none of these facilities were identified as the Site or adjacent properties. These facilities are listed in the database report in Appendix D.

4.2 Local Agency Inquiries

Agency Contacted/ Contact Method	Response
Lakeville Fire Department / by e-mail	Mr. Michael Meyer, Fire Chief, stated that the Lakeville Fire Department provides fire protection to the airport and has foam capable trucks. According to Mr. Meyer, the Lakeville Fire Department has used the Enforcer brand Firebull F3 Fluorine Free Foam for the past five years. The product website states that Firebull F3 holds third party verification of concentrate free from PFOS and other PFAS. He stated that the Lakeville Fire Department has not used foam at the airport in the past 12 years (the period of time reviewed for past activity). Mr. Meyer was unaware of any records for spills or leaks at the Site.
Dakota County Environmental Department / by e-mail	At the issuance of this report, a response had not been received from the Environmental Department.

5.0 SITE RECONNAISSANCE

5.1 General Site Information

Information contained in this section is based on a visual reconnaissance conducted while walking through the Site and the accessible interior areas of structures, if any, located on the Site. The Site and adjoining properties are depicted on the Site Diagram, which is included in Exhibit 2 of Appendix A. Photo documentation of the Site at the time of the visual reconnaissance is provided in Appendix B. Credentials of the individuals planning and conducting the Site visit are included in Appendix E.

General Site Information

5.2 Overview of Current Site Occupants and Operations

The Site is currently occupied by one airport runway, multiple taxiways, a shelter, two sheds, landscaped areas, a portion of a trout stream tributary, portions of Cedar Avenue and 225th Street West, and possible wetland areas. The airport is operated by the Metropolitan Airport Commission and is identified as Airlake Airport.

5.3 Site Observations

The following table summarizes Site observations and interviews. Affirmative responses (designated by an "X") are discussed in more detail following the table.

Site Characteristics

Category	Item or Feature	Observed or Identified
Site Operations, Processes, and Equipment	Emergency generators	
	Elevators	
	Air compressors	
	Hydraulic lifts	
	Dry cleaning	
	Photo processing	
	Ventilation hoods and/or incinerators	
	Waste treatment systems and/or water treatment systems	
	Heating and/or cooling systems	

Category	Item or Feature	Observed or Identified
	Paint booths	
	Sub-grade mechanic pits	
	Wash-down areas or carwashes	
	Pesticide/herbicide production or storage	
	Printing operations	
	Metal finishing (e.g., electroplating, chrome plating, galvanizing, etc.)	
	Salvage operations	
	Oil, gas or mineral production	
	Other processes or equipment	X
Aboveground Chemical or Waste Storage	Aboveground storage tanks	
	Drums, barrels and/or containers ≥ 5 gallons	
	MSDS or SDS	
Underground Chemical or Waste Storage, Drainage or Collection Systems	Underground storage tanks or ancillary UST equipment	
	Sumps, cisterns, French drains, catch basins and/or dry wells	
	Grease traps	
	Septic tanks and/or leach fields	
	Oil/water separators, clarifiers, sand traps, triple traps, interceptors

	Surface water bodies	X

Category	Item or Feature	Observed or Identified
Other Notable Site Features	Quarries or pits	
	Wastewater lagoons	
	Wells	

Site Operations, Processes, and Equipment

Other processes or equipment
The Site consists of one airport runway, multiple taxiways, a shelter, landscaped areas, 225th Street West, and Cedar Avenue.

Underground Chemical or Waste Storage, Drainage or Collection Systems

Pipeline markers
Pipeline markers were observed along 225th Street West in the southeastern portion at the Site. Associated labeling indicated that one pipeline contained natural gas and was owned by Minnesota Energy Resources. A second pipeline contained petroleum and was owned by Flint Hills Resources. Two other pipelines contained petroleum and were owned by Magellan.

Other Notable Site Features

Surface water bodies
An ephemeral trout stream was observed along the runway and the northern border of the Site. No water was observed in the trout stream at the time of Site reconnaissance. Mr. Dockry stated that water rarely runs through the trout stream.

A possible wetland area was observed in the southeastern portion of the Site. No evidence of chemical sheens was observed, and no noxious odors were noted emanating from the trout stream or the possible wetland area at the time of the Site reconnaissance.

6.0 ADJOINING PROPERTY RECONNAISSANCE

Visual observations of adjoining properties (from Site boundaries) are summarized below.

Adjoining Properties

Direction	Description
North	From west to east: 220th Street West followed by a commercial building occupied by SnowWolf, Dakota Truck, Legend, Kiehm Construction, and Custom Steelcraft (8415 220th Street West); grass land followed by 220th Street West and C-P Flexible Packaging (8235 220th Street West); Airlake Airport Maintenance Building (8140 220th Street West); 220th Street West followed by Menasha Corporation (8085 220th Street West); North Memorial Aircare Lakeville; Waypoint Flight Services and Aloft Aviation; Wentworth Aircraft, Inc.; numerous aircraft hangars; and Menasha (22202 Cedar Avenue)
East	225th Street West and agricultural cropland
South	From west to east: a rail line; vacant grass land; four hangars; agricultural cropland; 225th Street West; Lao Buddhist Temple of Minnesota (22605 Cedar Avenue); Cedar Avenue; wooded land and Vermillion River
West	Highview Avenue, a rail line, a natural gas pipeline station, agricultural cropland, and undeveloped vacant land

RECs were not observed with the adjoining properties.

7.0 ADDITIONAL SERVICES

Per the agreed scope of services specified in the proposal, additional services (e.g. asbestos sampling, lead-based paint sampling, wetlands evaluation, lead in drinking water testing, radon testing, vapor encroachment screening, etc.) were not conducted.

8.0 DECLARATION

I, Mark S. Miller, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

ASTM User Questionnaire

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must respond to the following questions. Failure to provide this information to the environmental professional may result in significant data gaps, which may limit our ability to identify recognized environmental conditions resulting in a determination that "all appropriate inquiry" is not complete. This form represents a type of interview and as such, the user has an obligation to answer all questions in good faith, to the extent of their actual knowledge.

1) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state, or local law (40 CFR 312.25)?
X No ___Yes (If yes, explain below and send Terracon a copy of the title records or judicial records reviewed.)

2) Did a search of recorded land title records (or judicial records where appropriate) identify any activity and use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state, or local law (40 CFR 312.26)?
X No ___Yes (If yes, explain below and send Terracon a copy of the title records or judicial records reviewed.)

3) Do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business (40 CFR 312-28)?
X No ___Yes (If yes, explain below)

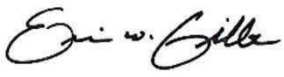

4) Do you have actual knowledge of a lower purchase price because contamination is known or believed to be present at the site (40 CFR 312.29)?
X No ___Yes ___Not applicable (If yes or Not applicable, explain below)

5) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases (40 CFR 312.30)?
X No ___Yes (If yes, explain below)

6) Based on your knowledge and experience related to the site, are there any obvious indicators that point to the presence or likely presence of contamination at the site (40 CFR 312.31)?
X No ___Yes (If yes, explain below)

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Terracon were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Terracon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Peer Review Request for Site Assessment Risk-Based Closure

Site Assessment Program

Doc Type: Final Status

Instructions: This document should be completed for all Site Assessment sites when a risk-based closure decision has been made by the project manager. A risk-based closure is when no further response action is planned (NFRAP) as the site has met the unlimited use and unrestricted exposure (UU/UE) requirements for the current or planned land use.

This form has two parts:

Part A – Request for site closure peer review:

1. Save form.
2. Update Site Assessment Tracking Tool (SATT).
3. Upload documents into Onbase (link to associated programs).
4. Complete Part A.
5. Submit using the button "Submit site for Peer Review of Risk Based Closure." This will send the form via email to Hans Neve for peer review.
6. Once closure is confirmed and the form is returned to you, proceed to part B.

Part B – Final administrative closure:

7. Complete Part B.
8. Submit using the button "Finalize closure of the site." This will send the form via email to to Pam Foster and Andrew Nichols.
9. Once form is completed, it will be uploaded into OnBase.

Part A: Site assessment risk-based closure (Unlimited use and unrestricted exposure)

Project manager: Kevin Sikkila Date (mm/dd/yyyy): 08/06/2015

Site name: Shooting Range SA number: SA225

Site summary (Briefly describe site closure recommendations for each of the following: contaminants of concern, impacted media [soil, groundwater, surface water, soil vapor], receptors, and current property use.)

The site in question is found in an exurban area of west-central Dakota County immediately south of the city of Farmington, specifically located in the southeast corner of the intersection of Cedar Avenue and 225th Street West, but with no formal listed address. It is owned by the Metropolitan Airport Commission (MAC), and was leased to the City of Lakeville Police Department and the Dakota County Sherriff's Department for use as a small arms target shooting range. The site occupies a former gravel quarry on the north end of a small wetland area with a likely hydrologic connection to the east-flowing Vermillion River, approximately 900 feet to the south. It is surrounded primarily by agricultural land. Topography is flat with a gradual slope to the south-southeast.

The two law enforcement agencies discontinued use of the site in October 2009, and initiated environmental investigation activities in November 2010 as a means of terminating their lease with the MAC. Environmental issues with metals impacts (primarily lead) were anticipated and planned for due to the nature of the site's use as a target range. Investigation results did in fact indicate elevated levels of lead and, to a lesser extent, arsenic, in site soils, with the highest concentrations found in the soil berm that formed the backdrop for the target setup area. Lead concentrations were observed to range from 50 mg/kg up to 10200 mg/kg, with consistent exceedances of the State Residential SRV of 300 mg/kg. Arsenic concentrations were slightly elevated above the State Residential SRV of 9 mg/kg in the berm area but not elsewhere. Surface water samples

Waste Description: STILL BOTTOMS FROM THE DISTILLATION OF BENZYL CHLORIDE.

Waste Code: K016
Waste Description: HEAVY ENDS OR DISTILLATION RESIDUES FROM THE PRODUCTION OF CARBON TETRACHLORIDE.

Waste Code: K017
Waste Description: HEAVY ENDS (STILL BOTTOMS) FROM THE PURIFICATION COLUMN IN THE PRODUCTION OF EPICHLOROHYDRIN.

Waste Code: K018
Waste Description: HEAVY ENDS FROM THE FRACTIONATION COLUMN IN ETHYL CHLORIDE PRODUCTION.

Waste Code: K019
Waste Description: HEAVY ENDS FROM THE DISTILLATION OF ETHYLENE DICHLORIDE IN ETHYLENE DICHLORIDE PRODUCTION.

Waste Code: K020
Waste Description: HEAVY ENDS FROM THE DISTILLATION OF VINYL CHLORIDE IN VINYL CHLORIDE MONOMER PRODUCTION.

Waste Code: K021
Waste Description: AQUEOUS SPENT ANTIMONY CATALYST WASTE FROM FLUOROMETHANE PRODUCTION.

Waste Code: K022
Waste Description: DISTILLATION BOTTOM TARS FROM THE PRODUCTION OF PHENOL/ACETONE FROM CUMENE.

Waste Code: K023
Waste Description: DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.

Waste Code: K024

APTUS (Continued) **1000427390**

Waste Description: DISTILLATION BOTTOMS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.

Waste Code: K025
Waste Description: DISTILLATION BOTTOMS FROM THE PRODUCTION OF NITROBENZENE BY THE NITRATION OF BENZENE.

Waste Code: K026
Waste Description: STRIPPING STILL TAILS FROM THE PRODUCTION OF METHYL ETHYL PYRIDINES.

Waste Code: K027
Waste Description: CENTRIFUGE AND DISTILLATION RESIDUES FROM TOLUENE DIISOCYANATE PRODUCTION.

Waste Code: K028
Waste Description: SPENT CATALYST FROM THE HYDROCHLORINATOR REACTOR IN THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.

Waste Code: K029
Waste Description: WASTE FROM THE PRODUCT STEAM STRIPPER IN THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.

Waste Code: K030
Waste Description: COLUMN BOTTOMS OR HEAVY ENDS FROM THE COMBINED PRODUCTION OF TRICHLOROETHYLENE AND PERCHLOROETHYLENE.

Waste Code: K031
Waste Description: BY-PRODUCT SALTS GENERATED IN THE PRODUCTION OF MSMA AND CACODYLIC ACID.

Waste Code: K032
Waste Description: WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF CHLORDANE.

Waste Code: K033
Waste Description: WASTEWATER AND SCRUB WATER FROM THE CHLORINATION OF CYCLOPENTADIENE IN THE PRODUCTION OF CHLORDANE.

Waste Code: K034
Waste Description: FILTER SOLIDS FROM THE FILTRATION OF HEXACHLOROCYCLOPENTADIENE IN THE PRODUCTION OF CHLORDANE.

Waste Code: K035
Waste Description: WASTEWATER TREATMENT SLUDGES GENERATED IN THE PRODUCTION OF CREOSOTE.

Waste Code: K036
Waste Description: STILL BOTTOMS FROM TOLUENE RECLAMATION DISTILLATION IN THE PRODUCTION OF DISULFOTON.

Waste Code: K037
Waste Description: WASTEWATER TREATMENT SLUDGES FROM THE PRODUCTION OF DISULFOTON.

Waste Code: K038
Waste Description: WASTEWATER FROM THE WASHING AND STRIPPING OF PHORATE PRODUCTION.

Waste Code: K039
Waste Description: FILTER CAKE FROM THE FILTRATION OF DIETHYLPHOSPHORODITHIOIC ACID IN THE PRODUCTION OF PHORATE.

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

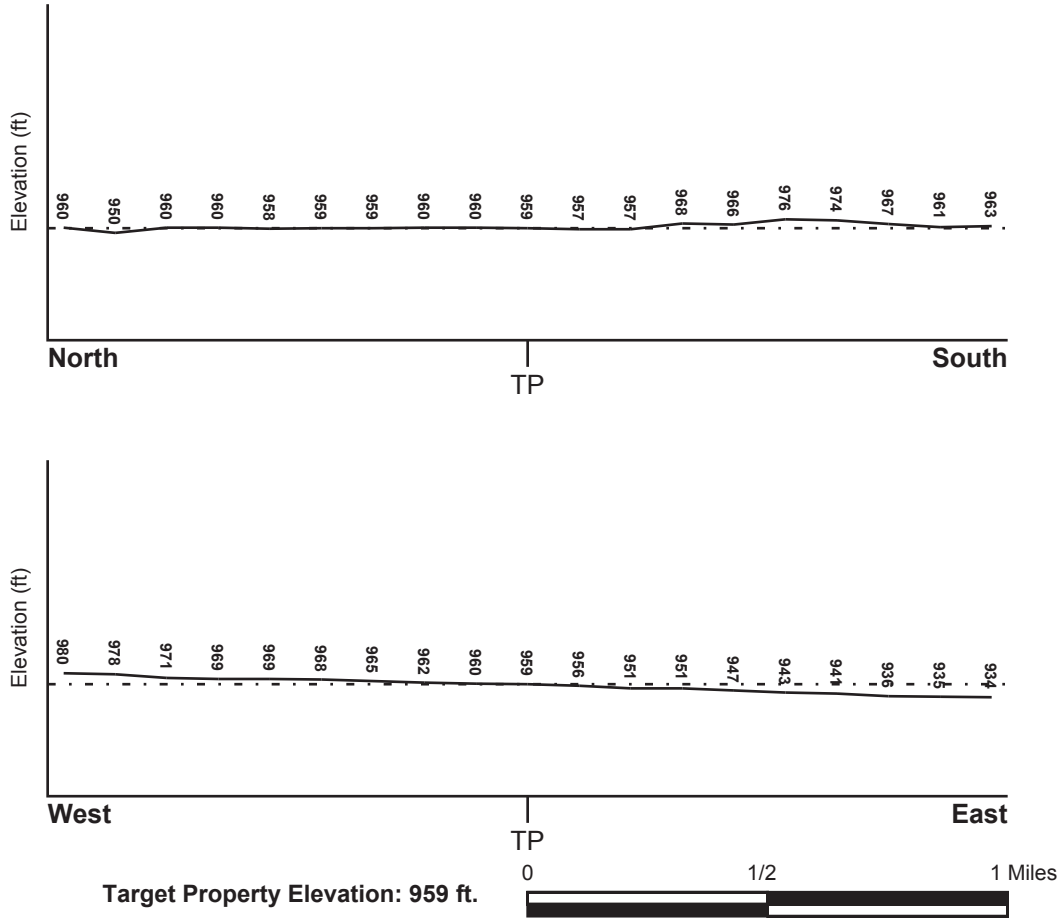

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	WAUKEGAN
Soil Surface Texture:	silt loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX E
CREDENTIALS

Zachary Ford

Field Scientist

PROFESSIONAL EXPERIENCE

Mr. Ford is a Field Scientist in Terracon's Minnesota offices. Mr. Ford's field project involvement includes collection of representative groundwater, soil-gas and indoor air samples for various remedial systems. Project duties include analysis of data and preparation of reports including Phase I Environmental Site Assessments (ESAs), Limited Site Investigations, and assisting in several aspects of National Environmental Policy Act (NEPA) reports. His duties include preparing technical reports, data collection, client interaction, site reconnaissance, field assignments, reporting, and sampling services.

Mr. Ford previously served as a Construction Materials Technician in Terracon's Minnesota offices. His responsibilities included fieldwork for the construction materials engineering and testing service line. Project involvement included field testing and observation of construction materials, shallow foundations, deep foundations, soil fill, concrete placement, asphalt pavement, reinforcing steel and masonry.

PROJECT EXPERIENCE

Phase I Environmental Site Assessments

Conducted over 100 Phase I Environmental Site Assessments in accordance with ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for various project sites in Minnesota, Wisconsin, Iowa, South Dakota, Nebraska, Oklahoma, Oregon, and Washington. Project sites include community solar gardens, electric vehicle charging stations, office/warehouse buildings, industrial, commercial, and national account retail stores. Project activities include site reconnaissance, historical research, records review, and report preparation.

Former Ford Motor Company Twin Cities Assembly Plant/Highland Bridge – St. Paul, Minnesota

Collected soil vapor samples for chemical analysis from push probe borings. Documented field conditions and sampling collection procedures, identified field indications of contamination, collected sample collection with subcontractors, and maintained sample chain-of-custody.

Limited Site Investigation – Wadena, Minnesota

Responsibilities included collection of groundwater, soil-gas, sub-slab soil vapor samples for chemical analysis of a petroleum leak site. Project activities included documentation of sampling collection procedures and field conditions.

Uptown Commons – North St. Paul, Minnesota
Performed oversight of installation of a sub-slab vapor mitigation system during construction of an underground parking garage.

O&M and Vapor Sampling Event – Burnsville, Minnesota
Performed sub-slab and indoor air vapor sampling as well as operations and maintenance of a previously installed vapor mitigation system associated with a nearby release of dry-cleaning solvents.

Vapor Intrusion Investigation – White Bear Lake, Minnesota
Assisted in the investigation and collection of soil vapor samples to delineate extent of vapor contamination plumes in residential and commercial properties. Assisted in data compilation and preparation of property summary reports.

Crest Cleaners – Blaine, Minnesota
Assisted in the investigation and collection of groundwater samples to delineate the extent of dry-cleaning contamination plumes in residential and commercial properties.

Founders Ridge – Bloomington, Minnesota
Assisted in the investigation and collection of sub-slab soil vapor samples for chemical analysis. Documented field conditions, sampling collection procedures, identified field indications of contamination, and maintained sample chain-of-custody.

MicroSource – Shakopee, Minnesota
Assisted in the investigation and collection of groundwater samples for chemical analysis of agricultural contaminants. Documented field conditions, sampling collection procedures, identified field indications of contamination, and maintained sample chain-of-custody.

NEPA Reports – Various Locations, Minnesota
Assisted in the preparation of NEPA reports for cellular tower projects in Minnesota. NEPA preparation activities include correspondence with various local, state, and federal agencies as well as tribes, public notices, and final report preparation.

Desktop Review Reports – Various Locations, Arizona, and New York
Conducted limited environmental site assessments by assembling information collected from historical research, and environmental records review.

Mark Miller

SENIOR PROJECT MANAGER / ENVIRONMENTAL SCIENTIST / AQUATIC BIOLOGIST

PROFESSIONAL EXPERIENCE

Mr. Miller has over 40 years of experience as an environmental scientist and senior project manager. Mr. Miller is also the National Account Manager for Ryan Companies US, Inc. assisting them with due diligence investigations and brownfields redevelopment projects across the United States with the local Terracon Consultants, Inc. offices.

Mr. Miller has significant experience in conducting and managing Phase I and II Environmental Site Assessments (ESAs), environmental compliance assessments, remediation projects, underground storage tank investigation, and natural resources investigations. He has conducted ESAs on over 400 sites varying from open, undeveloped land to occupied commercial and industrial sites covering areas as small as less than one acre, areas of several square city block to sites over 300-acres. Phase I and II projects vary from greenfield sites to impacted sites including EPA Superfund Sites, state priority list and voluntary investigation and cleanup sites and leaking underground storage tank sites. He has conducted compliance assessments of commercial and industrial facilities. He has successfully completed soil/groundwater remediation, hazardous waste clean-up, tank-removals and remedial work at affected sites to the satisfaction of regulatory agencies, developers and their lenders. Mr. Miller also has experience with all types of interested parties (buyers, developers, lenders, lessees, and stockholders). Mr. Miller has managed environmental remediation projects and he has entered many projects into voluntary clean-up programs and obtained assurance letters from regulatory agencies.

Mr. Miller is the quality control manager for NPDES storm water runoff monitoring programs at the Metropolitan Airport Commission; delineation/identification of wetland areas; identification of impacts to damaged biological systems; enhancement of existing wetlands; creation of mitigation wetlands; and the collection, analysis and interpretation of biological and water quality data for investigations to reduce nutrient and sediment loadings and to mitigate the effects of acid rain on aquatic ecosystems and to reduce nutrient and sediment loadings. Mr. Miller's activities include preparation of monitoring plans, monitoring site selection/evaluation, analysis/interpretation of water quality data, development and implementation of fish management plans, aquatic biota collection and analysis and report writing.

PROJECT EXPERIENCE

Ryan Companies US, Inc. Downtown East Redevelopment Project – Minneapolis, MN

Mr. Miller was the Project Manager for a five-city block redevelopment area of the former Star Tribune newspaper site in downtown Minneapolis, Minnesota. Terracon Consultants, Inc. was retained by a Ryan Companies US, Inc. after submitting a proposal, Terracon was tasked with conducting Phase I and Limited Phase II ESAs, obtaining No Association Determination letters from the Minnesota Pollution Control Agency for known impacts at the site, preparing a Response Action Plan for submittal to and approval by the Minnesota Pollution Control Agency, implementation of the Response Action Plan and response to numerous previously unknown tanks, wells, impacted areas, etc. and preparation of a Response Action Implementation Report.

The former Star Tribune newspaper site consisted of three commercial buildings addressed as 700, 716 4th Street South, 329 and 429 Portland Avenue South in Minneapolis, Minnesota. These buildings were located on blocks 69, 70 and 74 in the east side of downtown Minneapolis. Blocks 68 and 75 were surface parking lots. The proposed plan was to demolish the three buildings and repurpose the area into a mixed use including: a public place, residential units, office tower and a parking garage. Historically, the site consisted of

The Minnesota Pollution Control Agency issued a No Further Action Determination letter based on the Response Action Implementation Report. Additionally, the redevelopment project won the 2016 Minnesota Brownfields Economic Impact award.

NPDES Compliance Monitoring Program, Metropolitan Airports Commission (MAC), Minneapolis-St. Paul International Airport (MSP)

Mr. Miller was the Quality Control Manager for NPDES storm water runoff monitoring programs at the Metropolitan Airport Commission. Currently, there are eight permitted outfalls discharging to the Minnesota River and Mother Lake from MSP. The discharge is permitted through the National Pollution Discharge Elimination System (NPDES) / State Disposal System permit issued by the Minnesota Pollution Control Agency (MPCA) to MAC and co-permittees. The outfalls are monitored 24-hours per day, 365 days per year. The field and analytical information is summarized and submitted to the MPCA in a monthly discharge monitoring report. Responsibilities include project coordination, coordination with contract laboratories, data analysis and reporting. Mr. Miller has been the quality control manager and/or project manager for the NPDES monitoring program since 1994.

Cliffs Erie LLC, Unnamed Creek Fish Population Assessment near Dunka Mine – Babbitt, MN

Mr. Miller is the Project Manager and field biologist for conducting a fish population assessment in support of a variance to the NPDES permit for Dunka Mine. The project requires electrofishing two reaches of the Unnamed Creek twice per year. Fish are captured using electrofishing techniques using a protocol approved by the MPCA. Once captured, the fish species are determined, are weighed, measured, and released. Responsibilities include project management, obtaining a permit to conduct the electrofishing from the Minnesota Department of Natural Resources (MNDNR), providing the MNDNR with notifications required by the permit, conducting the fish population assessment and preparing summary reports for the client and MNDNR. Mr. Miller has been the Project Manager and field biologist for the Unnamed Creek Fish Population Assessment since 2001.

Mark Miller (continued)

Construction Site Groundwater Discharge – Multiple sites

Mr. Miller was the Project Manager for multiple redevelopment construction sites which have soil and/or groundwater contamination. Mark's responsibilities include determining water quality for subsequent discharge to wastewater treatment facilities or storm sewer or determining if pre-treatment is required prior to discharge. Mr. Miller has been assisting on multiple Ryan Companies US, Inc. sites since 1988.

Mathew Knutson

Department Manager/Project Engineer

PROFESSIONAL EXPERIENCE

Mr. Knutson is a department manager and environmental engineer at Terracon Consultants, Inc. He has over 23 years' experience working on a wide array of environmental issues with a focus on airport environmental consulting. During this time, Mat has developed an expertise in airport NPDES stormwater permitting and compliance, aircraft deicing collection system design/operation, regulatory liaison, environmental management information system (EMIS) development, air quality, and as a primary contact for client relations. Recently, Mat has been helping airport clients address the rapidly evolving world of PFAS.

Mr. Knutson is the contract manager for the Minneapolis-St. Paul International Airport (MSP) continuing consulting engagement, including the project manager for the cornerstone NPDES permit compliance program. He also manages various MSP environmental projects including solid waste management, groundwater monitoring/reporting, carbon reduction, remediation, and EMIS integration. Mr. Knutson has been the project manager and engineer for a series of research projects designed to better understand aircraft deicing fluid's (ADF) impacts on airport stormwater discharge and how the airport's current infrastructure performs in capturing and containing spent ADF. Mr. Knutson also supports industrial clients, including stormwater consulting for various taconite mines in northern Minnesota.

Mr. Knutson is a member of the Airports Council International-North America (ACI-NA) environmental steering group and helps guide ACI-NA's PFAS working group as they work to develop support for the airport community related to PFAS.

PROJECT EXPERIENCE

MSP NPDES Compliance for Metropolitan Airports Commission (MAC)

Mr. Knutson serves as the project manager for the NPDES compliance and data management project as well as the project engineer for the MSP glycol recovery program. He coordinates and oversees the compilation and analysis of one of the world's largest airport environmental data collection activities, providing significant insight into the performance of a variety of glycol collection activities and the potential effects of aircraft deicing on stormwater discharges. Responsibilities include managing the 365-days-per-year stormwater sampling program, overseeing glycol application and collection information, and interpreting results for future planning and overall program management.

Rochester International Airport (RST)

Mr. Knutson is the project manager and primary client contact for Rochester International Airport (RST) in southern Minnesota. Some of his activities have

included NPDES Permit negotiation and compliance, stormwater sampling program design and oversight, glycol collection program review and optimization, and SWPPP preparation and implementation. is the lead engineer providing environmental review of potential options to upgrade stormwater system to better contain and manage glycol impacted stormwater in the future.

Glycol Recovery Program Lead Engineer
Mr. Knutson has a hands-on working knowledge of glycol recovery variables and their specific ramifications on containment goals. His experience includes developing and optimizing the glycol recovery program at MSP and tracking program effectiveness of incremental advances each season. Containment technologies employed include storm sewer plug and pump, dedicated deicing pads, glycol recovery vehicles, contained snow melters, and other source controls. In addition, he has researched performance effectiveness and implementation issues of other glycol recovery technologies (centralized pads, infrared systems, etc.).

Deicing Fluid Recovery System Design Review
Mr. Knutson provided system design review for a deicing pad expansion and glycol recovery system upgrade at a Colorado Airport. The review included plans and specifications overview and calculations to confirm adequate sizing and capacity of system components. Additional input on deicing pad elements to increase collection performance and reduce potential operational and maintenance challenges were also provided in the review.

Environmental Management Information System (EMIS) Development
Mr. Knutson was the project manager and technical lead for the 2013 deployment of an EMIS for the Metropolitan Airports Commission. He assisted in vendor selection, scoping, system architecture, and deployment. He is the project lead on EMIS implementation and additional development as the program expands into additional areas of focus.

Taconite Facility NPDES Permit Application, EIS, and Compliance Support
Mr. Knutson served as a project engineer for major taconite facility NPDES permit applications, EIS support, and general surface water consulting. He developed NPDES permit applications and served as technical liaison with regulatory agency. This included help in ushering applications through complex negotiations and successful issuance. Work experiences include development of customized mining water balance and understanding the various conditions that impact flow measurements and ultimate discharge conditions from the mine. In addition, discharge impact analyses on area lakes and water resources were conducted in support of the EIS and non-degradation reviews.

Taconite Turbidity Treatment System Development
Mr. Knutson served as a project team member on major taconite facility turbidity treatment system developed in 2009 and completed construction in 2010. Treatment system was designed by Liesch and construction oversight also provided. The system was designed to alleviate turbidity concerns that had existed for years and early indications are that the system is operating as designed and discharges are meeting turbidity limits.

Airport Carbon Accreditation and Carbon Reduction Plan Development
Mr. Knutson spearheaded the efforts in 2016 for the Metropolitan Airports Commission to accurately calculate greenhouse gas emissions (GHG) from airport activities. He and his team helped MSP apply for and maintain annual certification under the Airport Carbon Accreditation program. Part of this effort included the development

of a Carbon Reduction Plan. This Plan established a carbon reduction target and identified various airport capital improvement projects that would be pursued to achieve the target reductions.

MSP Comprehensive Groundwater Monitoring Program
Mr. Knutson is the lead engineer and project manager for MSP's comprehensive groundwater monitoring program. He was integral in negotiating program components with the regulatory agency, siting monitoring wells, managing monitoring well installations, and now oversees the monitoring and analysis of well data. The program has included comprehensive reviews of airport hydrogeology and development of a groundwater flow conceptual model through complex subsurface conditions.

Rhode Island Airport Corporation and RI Department of Environmental Management
Mr. Knutson served as the technical mediator for NPDES re-permitting dispute between the Rhode Island Airport Corporation and the Rhode Island Department of Environmental Management. He assisted as a technical liaison between the regulated parties and the regulators to help facilitate an NPDES permit that was both operationally practical and cost effective while maintaining protection for the environment.

Indianapolis International Airport Capital and O&M Financial Cost Modeling
Mr. Knutson assisted the Indianapolis Airport Authority (IAA) in developing a 20-year cost model for various deicing collection and management options that are currently under review. He reviewed existing and proposed system designs given various potential changes to airport operations over the study period. Information was compiled, and a customized financial modeling tool was developed for IAA use moving forward in the decision-making process.

Environmental Review Documented CatEx Development
Developed FAA documented categorical exclusion for planned construction project at a major international airport. Review included operational, environmental, and social aspects of the project as it related to potential impacts. Oversaw environmental site assessment documents and architectural and archeological surveys in support of CatEx development.

Taconite Tailings Basin Model Development
Assistant project engineer for various work efforts related to scrubber blow-down water sulfate treatment systems. Projects have included optimizing the treatment efficiencies of existing equipment as well as conceptual design and review of potential treatment technologies. Work experience includes development of detailed tailings basin model which provides the ability to model various treatment variables and predict future tailings basin water quality characteristics.

Waste Program Development and Optimization
Assisted major international airport with multi-year effort to design solid waste management diversion programs and develop method to measure program performance. Efforts included leading waste audit activities, back-of-house organics program optimization, waste collection data compilation, and coordination with janitorial contractors to review procedures.

APPENDIX F
DESCRIPTION OF TERMS AND ACRONYMS

Description of Selected General Terms and Acronyms

Term/Acronym	Description
ACM	Asbestos Containing Material. Asbestos is a naturally occurring mineral, three varieties of which (chrysotile, amosite, crocidolite) have been commonly used as fireproofing or binding agents in construction materials. Exposure to asbestos, as well as ACM, has been documented to cause lung diseases including asbestosis (scarring of the lung), lung cancer and mesothelioma (a cancer of the lung lining). Regulatory agencies have generally defined ACM as a material containing greater that one (1) percent asbestos, however some states (e.g. California) define ACM as materials having 0.1% asbestos. In order to define a homogenous material as non-ACM, a minimum number of samples must be collected from the material dependent upon its type and quantity. Homogenous materials defined as non-ACM must either have 1) no asbestos identified in all of its samples or 2) an identified asbestos concentration below the appropriate regulatory threshold. Asbestos concentrations are generally determined using polarized light microscopy or transmission electron microscopy. Point counting is an analytical method to statistically quantify the percentage of asbestos in a sample. The asbestos component of ACM may either be friable or non-friable. Friable materials, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure and have a higher potential for a fiber release than non-friable ACM. Non-friable ACM are materials that are firmly bound in a matrix by plastic, cement, etc. and, if handled carefully, will not become friable. Federal and state regulations require that either all suspect building materials be presumed ACM or that an asbestos survey be performed prior to renovation, dismantling, demolition, or other activities that may disturb potential ACM. Notifications are required prior to demolition and/or renovation activities that may impact the condition of ACM in a building. ACM removal may be required if the ACM is likely to be disturbed or damaged during the demolition or renovation. Abatement of friable or potentially friable ACM must be performed by a licensed abatement contractor in accordance with state rules and NESHAP. Additionally, OSHA regulations for work classification, worker training and worker protection will apply.
AHERA	Asbestos Hazard Emergency Response Act
AST	Aboveground Storage Tanks. ASTs are generally described as storage tanks less than 10% of which are below ground (i.e., buried). Tanks located in a basement, but not buried, are also considered ASTs. Whether, and the extent to which, an AST is regulated, is determined on a case-by-case basis and depends upon tank size, its contents and the jurisdiction of its location.
BGS	Below Ground Surface
Brownfields	State and/or tribal listing of Brownfield properties addressed by Cooperative Agreement Recipients or Targeted Brownfields Assessments.
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes. BTEX are VOC components found in gasoline and commonly used as analytical indicators of a petroleum hydrocarbon release.
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act (a.k.a. Superfund). CERCLA is the federal act that regulates abandoned or uncontrolled hazardous waste sites. Under this Act, joint and several liability may be imposed on potentially responsible parties for cleanup-related costs.
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System. An EPA compilation of sites having suspected or actual releases of hazardous substances to the environment. CERCLIS also contains information on site inspections, preliminary assessments and remediation of hazardous waste sites. These sites are typically reported to EPA by states and municipalities or by third parties pursuant to CERCLA Section 103.
CESQG	Conditionally Exempt Small Quantity Generators
CFR	Code of Federal Regulations

Description of Selected General Terms and Acronyms

Term/Acronym	Description
CREC	Controlled Recognized Environmental Condition is defined in ASTM E1527-13 as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) , with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report."
DOT	U.S. Department of Transportation
EPA	U.S. Environmental Protection Agency
ERNS	Emergency Response Notification System. An EPA-maintained federal database which stores information on notifications of oil discharges and hazardous substance releases in quantities greater than the applicable reportable quantity under CERCLA. ERNS is a cooperative data-sharing effort between EPA, DOT, and the National Response Center.
ESA	Environmental Site Assessment
FRP	Fiberglass Reinforced Plastic
Hazardous Substance	As defined under CERCLA, this is (A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title; (C) any hazardous waste having characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (with some exclusions); (D) any toxic pollutant listed under section 1317(a) of Title 33; (E) any hazardous air pollutant listed under section 112 of the Clean Air Act; and (F) any imminently hazardous chemical substance or mixture with respect to which the EPA Administrator has taken action under section 2606 of Title 15. This term does not include petroleum, including crude oil or any fraction thereof which is not otherwise listed as a hazardous substance under subparagraphs (A) through (F) above, and the term include natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).
Hazardous Waste	This is defined as having characteristics identified or listed under section 3001 of the Solid Waste Disposal Act (with some exceptions). RCRA, as amended by the Solid Waste Disposal Act of 1980, defines this term as a "solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed."
HREC	Historical Recognized Environmental Condition is defined in ASTM E1527-13 as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

Description of Selected General Terms and Acronyms

Term/Acronym	Description
IC/EC	A listing of sites with institutional and/or engineering controls in place. IC include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. EC include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.
ILP	Innocent Landowner/Operator Program
LQG	Large Quantity Generators
LUST	Leaking Underground Storage Tank. This is a federal term set forth under RCRA for leaking USTs. Some states also utilize this term.
MCL	Maximum Contaminant Level. This Safe Drinking Water concept (and also used by many states as a ground water cleanup criteria) refers to the limit on drinking water contamination that determines whether a supplier can deliver water from a specific source without treatment.
MSDS	Material Safety Data Sheets. Written/printed forms prepared by chemical manufacturers, importers and employers which identify the physical and chemical traits of hazardous chemicals under OSHA's Hazard Communication Standard.
NESHAP	National Emissions Standard for Hazardous Air Pollutants (Federal Clean Air Act). This part of the Clean Air Act regulates emissions of hazardous air pollutants.
NFRAP	Facilities where there is "No Further Remedial Action Planned," as more particularly described under the Records Review section of this report.
NOV	Notice of Violation. A notice of violation or similar citation issued to an entity, company or individual by a state or federal regulatory body indicating a violation of applicable rule or regulations has been identified.
NPDES	National Pollutant Discharge Elimination System (Clean Water Act). The federal permit system for discharges of polluted water.
NPL	The NPL is the EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund Program.
OSHA	Occupational Safety and Health Administration or Occupational Safety and Health Act
PACM	Presumed Asbestos-Containing Material. A material that is suspected of containing or presumed to contain asbestos but which has not been analyzed to confirm the presence or absence of asbestos.
PCB	Polychlorinated Biphenyl. A halogenated organic compound commonly in the form of a viscous liquid or resin, a flowing yellow oil, or a waxy solid. This compound was historically used as dielectric fluid in electrical equipment (such as electrical transformers and capacitors, electrical ballasts, hydraulic and heat transfer fluids), and for numerous heat and fire sensitive applications. PCB was preferred due to its durability, stability (even at high temperatures), good chemical resistance, low volatility, flammability, and conductivity. PCBs, however, do not break down in the environment and are classified by the EPA as a suspected carcinogen. 1978 regulations, under the Toxic Substances Control Act, prohibit manufacturing of PCB-containing equipment; however, some of this equipment may still be in use today.
pCi/L	picoCuries per Liter of Air. Unit of measurement for Radon and similar radioactive materials.
PLM	Polarized Light Microscopy (see ACM section of the report, if included in the scope of services)
PST	Petroleum Storage Tank. An AST or UST that contains a petroleum product.

Description of Selected General Terms and Acronyms

Term/Acronym	Description
Radon	A radioactive gas resulting from radioactive decay of naturally-occurring radioactive materials in rocks and soils containing uranium, granite, shale, phosphate, and pitchblende. Radon concentrations are measured in picoCuries per Liter of Air. Exposure to elevated levels of radon creates a risk of lung cancer; this risk generally increases as the level of radon and the duration of exposure increases. Outdoors, radon is diluted to such low concentrations that it usually does not present a health concern. However, radon can accumulate in building basements or similar enclosed spaces to levels that can pose a risk to human health. Indoor radon concentrations depend primarily upon the building's construction, design and the concentration of radon in the underlying soil and ground water. The EPA recommended annual average indoor "action level" concentration for residential structures is 4.0 pCi/l.
RCRA	Resource Conservation and Recovery Act. Federal act regulating solid and hazardous wastes from point of generation to time of disposal ('cradle to grave"). 42 U.S.C. 6901 et seq.
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQG produce at least 1000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQG produce 100-1000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.
RCRA CORRACTS/TSDs	The USEPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous materials which are undergoing "corrective action". A "corrective action" order is issued when there is a release of hazardous waste or constituents into the environment from a RCRA facility.
RCRA Non-CORRACTS/TSDs	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.
RCRA Violators List	RAATS. RCRA Administrative Actions Taken. RAATS information is now contained in the RCRIS database and includes records of administrative enforcement actions against facilities for noncompliance.
RCRIS	Resource Conservation and Recovery Information System, as defined in the Records Review section of this report.
REC	Recognized Environmental Conditions are defined by ASTM E1527-13 as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment. De minimis conditions are not recognized environmental conditions."
SCL	State "CERCLIS" List (see SPL /State Priority List, below).
SPCC	Spill Prevention, Control and Countermeasures. SPCC plans are required under federal law (Clean Water Act and Oil Pollution Act) for any facility storing petroleum in tanks and/or containers of 55-gallons or more that when taken in aggregate exceed 1,320 gallons. SPCC plans are also required for facilities with underground petroleum storage tanks with capacities of over 42,000 gallons. Many states have similar spill prevention programs, which may have additional requirements.
SPL	State Priority List. State list of confirmed sites having contamination in which the state is actively involved in clean up activities or is actively pursuing potentially responsible parties for clean up. Sometimes referred to as a State "CERCLIS" List.
SQG	Small Quantity Generator
SWF/LF	State and/or Tribal database of Solid Waste/Landfill facilities. The database information may include the facility name, class, operation type, area, estimated operational life, and owner.
TPH	Total Petroleum Hydrocarbons
TRI	Toxic Release Inventory. Routine EPA report on releases of toxic chemicals to the environment based upon information submitted by entities subject to reporting under the Emergency Planning and Community Right to Know Act.

Description of Selected General Terms and Acronyms

Term/Acronym	Description
TSCA	Toxic Substances Control Act. A federal law regulating manufacture, import, processing and distribution of chemical substances not specifically regulated by other federal laws (such as asbestos, PCBs, lead-based paint and radon). 15 U.S.C 2601 et seq.
USACE	United States Army Corps of Engineers
USC	United States Code
USGS	United States Geological Survey
USNRCS	United States Department of Agriculture-Natural Resource Conservation Service
UST	Underground Storage Tank. Most federal and state regulations, as well as ASTM E1527-13, define this as any tank, incl., underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10% or more beneath the surface of the ground (i.e., buried).
VCP	State and/or Tribal facilities included as Voluntary Cleanup Program sites.
VOC	Volatile Organic Compound
Wetlands	Areas that are typically saturated with surface or ground water that creates an environment supportive of wetland vegetation (i.e., swamps, marshes, bogs). The Corps of Engineers Wetlands Delineation Manual (Technical Report Y-87-1) defines wetlands as areas inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. For an area to be considered a jurisdictional wetland, it must meet the following criteria: more than 50 percent of the dominant plant species must be categorized as Obligate, Facultative Wetland, or Facultative on lists of plant species that occur in wetlands; the soil must be hydric; and, wetland hydrology must be present. The federal Clean Water Act which regulates “waters of the US,” also regulates wetlands, a program jointly administered by the USACE and the EPA. Waters of the U.S. are defined as: (1) waters used in interstate or foreign commerce, including all waters subject to the ebb and flow of tides; (2) all interstate waters including interstate wetlands; (3) all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, etc., which the use, degradation, or destruction could affect interstate/ foreign commerce; (4) all impoundments of waters otherwise defined as waters of the U. S., (5) tributaries of waters identified in 1 through 4 above; (6) the territorial seas; and (7) wetlands adjacent to waters identified in 1 through 6 above. Only the USACE has the authority to make a final wetlands jurisdictional determination.
