### **Minneapolis – St. Paul International Airport Carbon Policy Statement**

The Metropolitan Airports Commission (MAC) is committed to a sustainable future and recognizes the importance of reducing and managing the environmental impacts from the Minneapolis – St. Paul International Airport (MSP).

A central element of this commitment is responsible carbon management through strategies that prioritize efficiency, electrification, renewable energy, and energy use reduction. As part of its sustainability initiatives, the MAC will implement targeted strategies to achieve year-over-year reductions in carbon emissions. These efforts will build on the MAC's established practices in energy efficiency and operational improvements – measures that reduce the airport's carbon footprint while upholding the safe and efficient air service for which MSP is known.

This approach supports MAC's purpose: to deliver exceptional airport experiences so Minnesota thrives.
