### **Metropolitan Airports Commission – Reliever Airports Carbon Policy Statement**

The Metropolitan Airports Commission (MAC) is committed to a sustainable future and recognizes the importance of reducing and managing the environmental impacts from its six reliever airports: Airlake Airport, Anoka County – Blaine Airport, Crystal Airport, Flying Cloud Airport, Lake Elmo Airport, and St. Paul Downtown Airport.

A central element of this commitment is responsible carbon management through strategies that prioritize efficiency, electrification, renewable energy, and energy use reduction. These efforts will build on the MAC's established practices in energy efficiency and operational improvements – measures that reduce the airports' carbon footprint while maintaining the safe and efficient air service for which its airports are known.

This approach supports MAC's purpose: to deliver exceptional airport experiences so Minnesota thrives.
